

A tablet in every hand. An eye on every threat.

One Application for All Your Decisions.

Dispatchr offers an application ecosystem tailored specifically for asset management, emergency management, maintenance & construction, vegetation management and related field work that reduces risk, reduces costs, increases safety & productivity and ultimately increases customer satisfaction.

The Dispatchr Platform delivers secure, relevant real-time geospatial field information for work crews, managers and executives making decisions (routine to critical) involving utility related assets.

Live Crews

View live crew positions on an interactive map. Check the status of crew deployments in real-time. Instantly view persistent, accurate crew field notes.

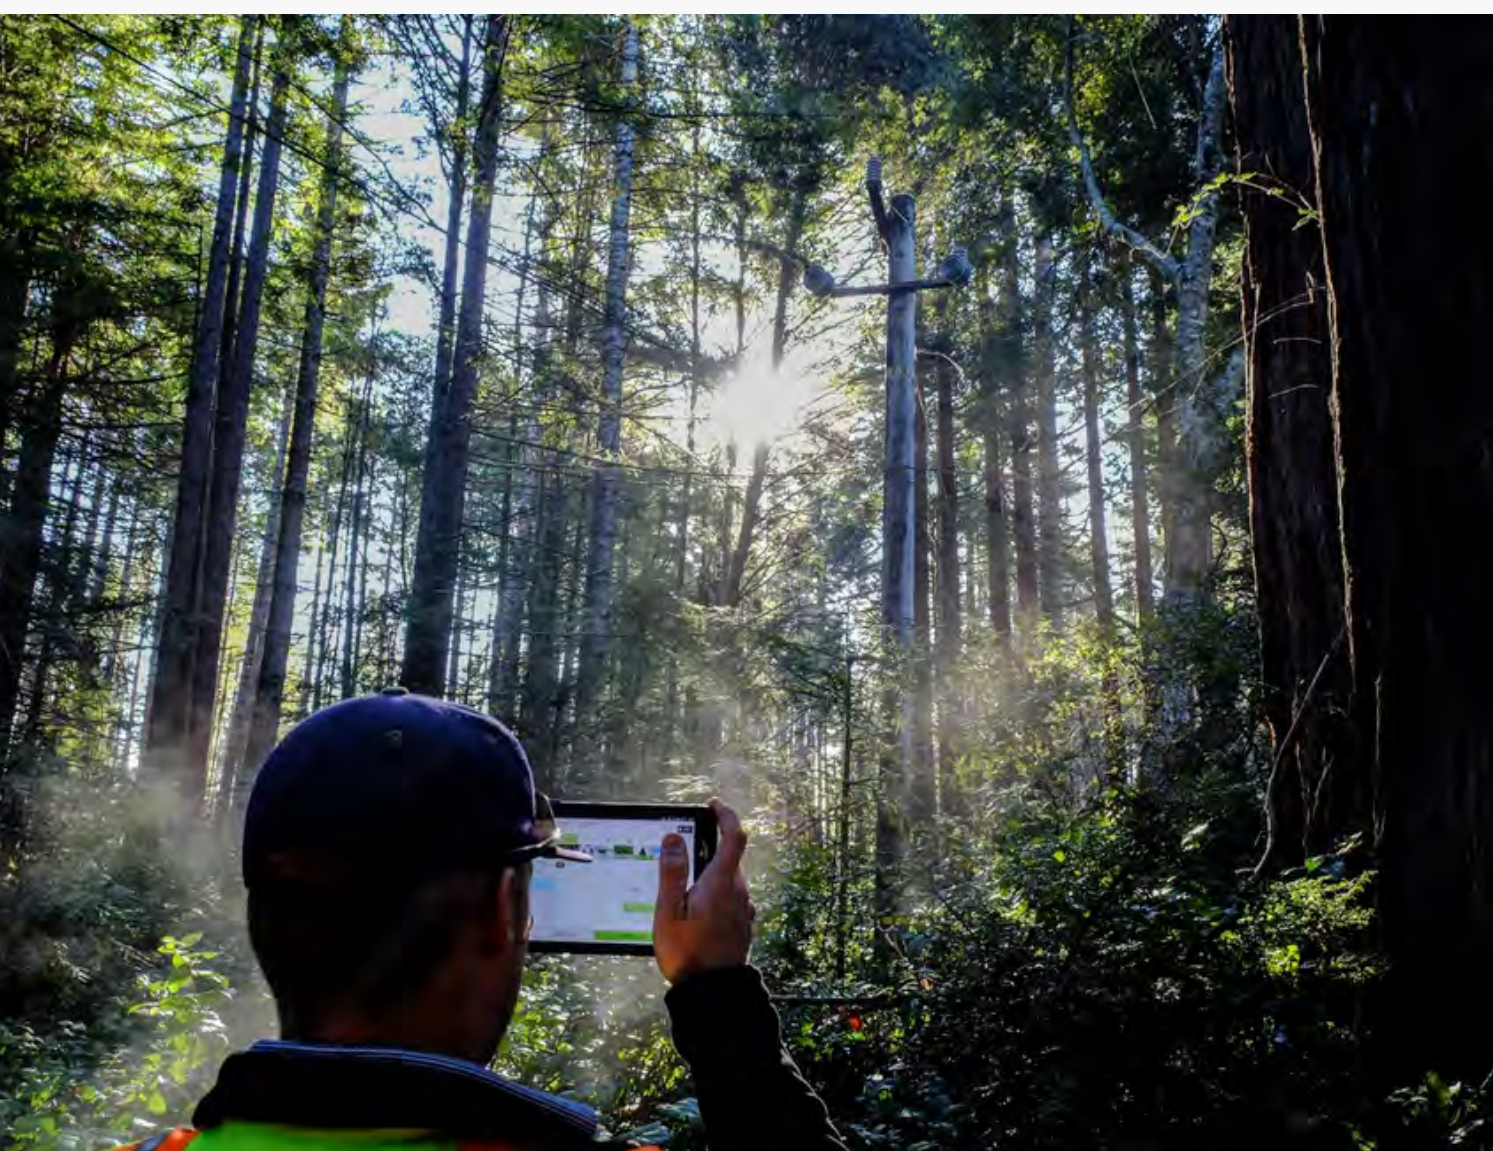

All Assets in One Location

Access, view or inspect asset (e.g. poles, towers, meters, trees) information geospatially from anywhere.

Adaptive Workforce Dispatching

In addition to creating, assigning, updating and closing out a work order from the field or in the office, users can view available work, work schedules and crew workload all in one place.

- 1 -

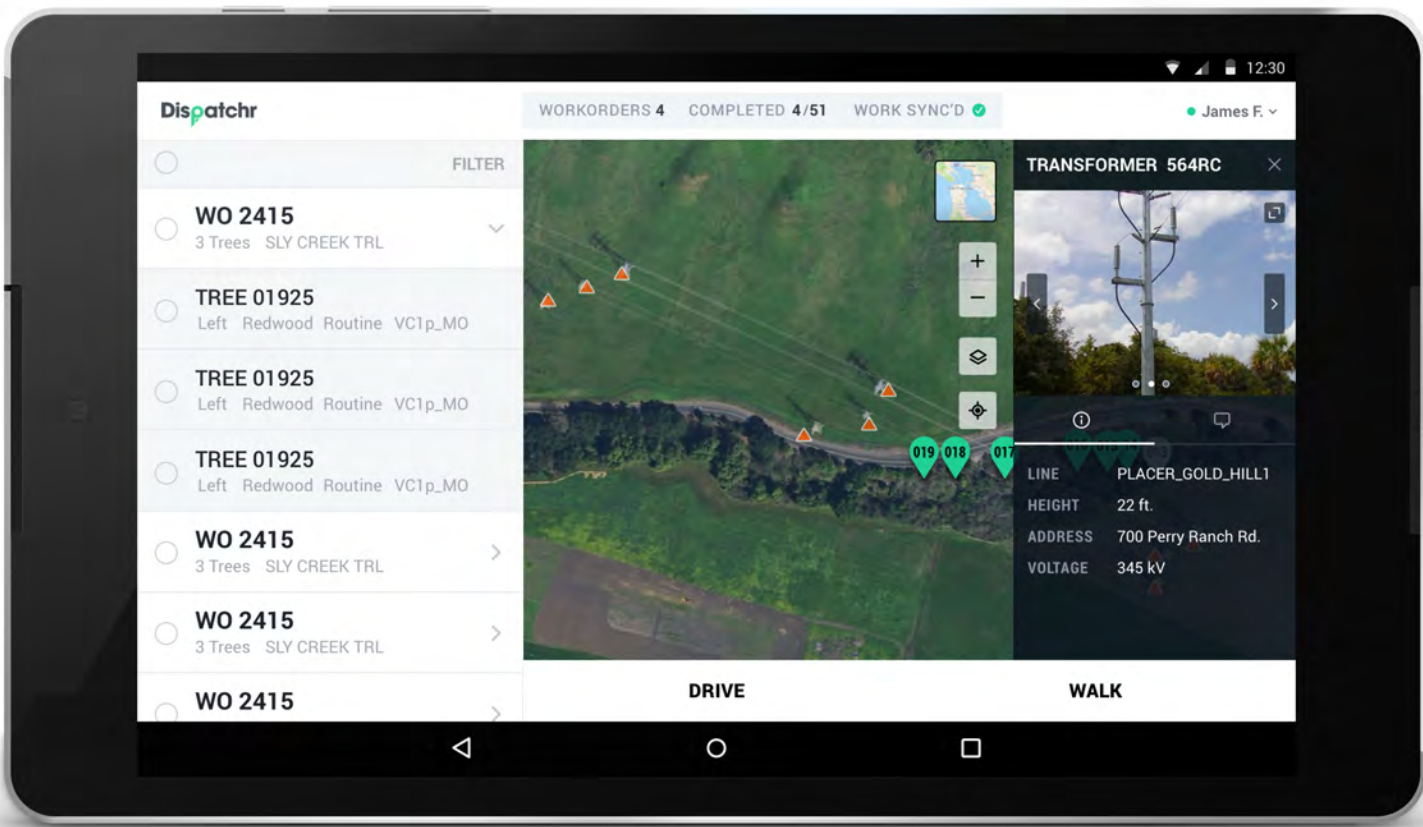

Create Work, Anywhere

With the snap of a picture, press of a button or click of a mouse, new work orders can be created from anywhere or generated from almost any designated source. Because there's no paper to handle, requested work (audits, transfers, etc.) becomes immediately available for review, approval, scheduling and billing. The delay between identifying needed work and finishing the job is reduced to amount of time it takes to make a decision and execute the work at hand - not the amount of time it takes to move paper from department to department.

Live Crew Updates and Notifications

Out in the field, the Dispatchr Platform provides live crew to crew and crew to management progress updates for both internal and external workforce users. Work crews receive their orders and report on their progress on site, which allows managers and other crews to stay up-to-date on what is happening throughout their project.

Automatic workflow notifications can be set to alert appropriate parties or signal that the next step of a process may begin. This effective deployment of resources reduces both the risk and impact of outages as well as the cost of redundant inspections and related workflows.

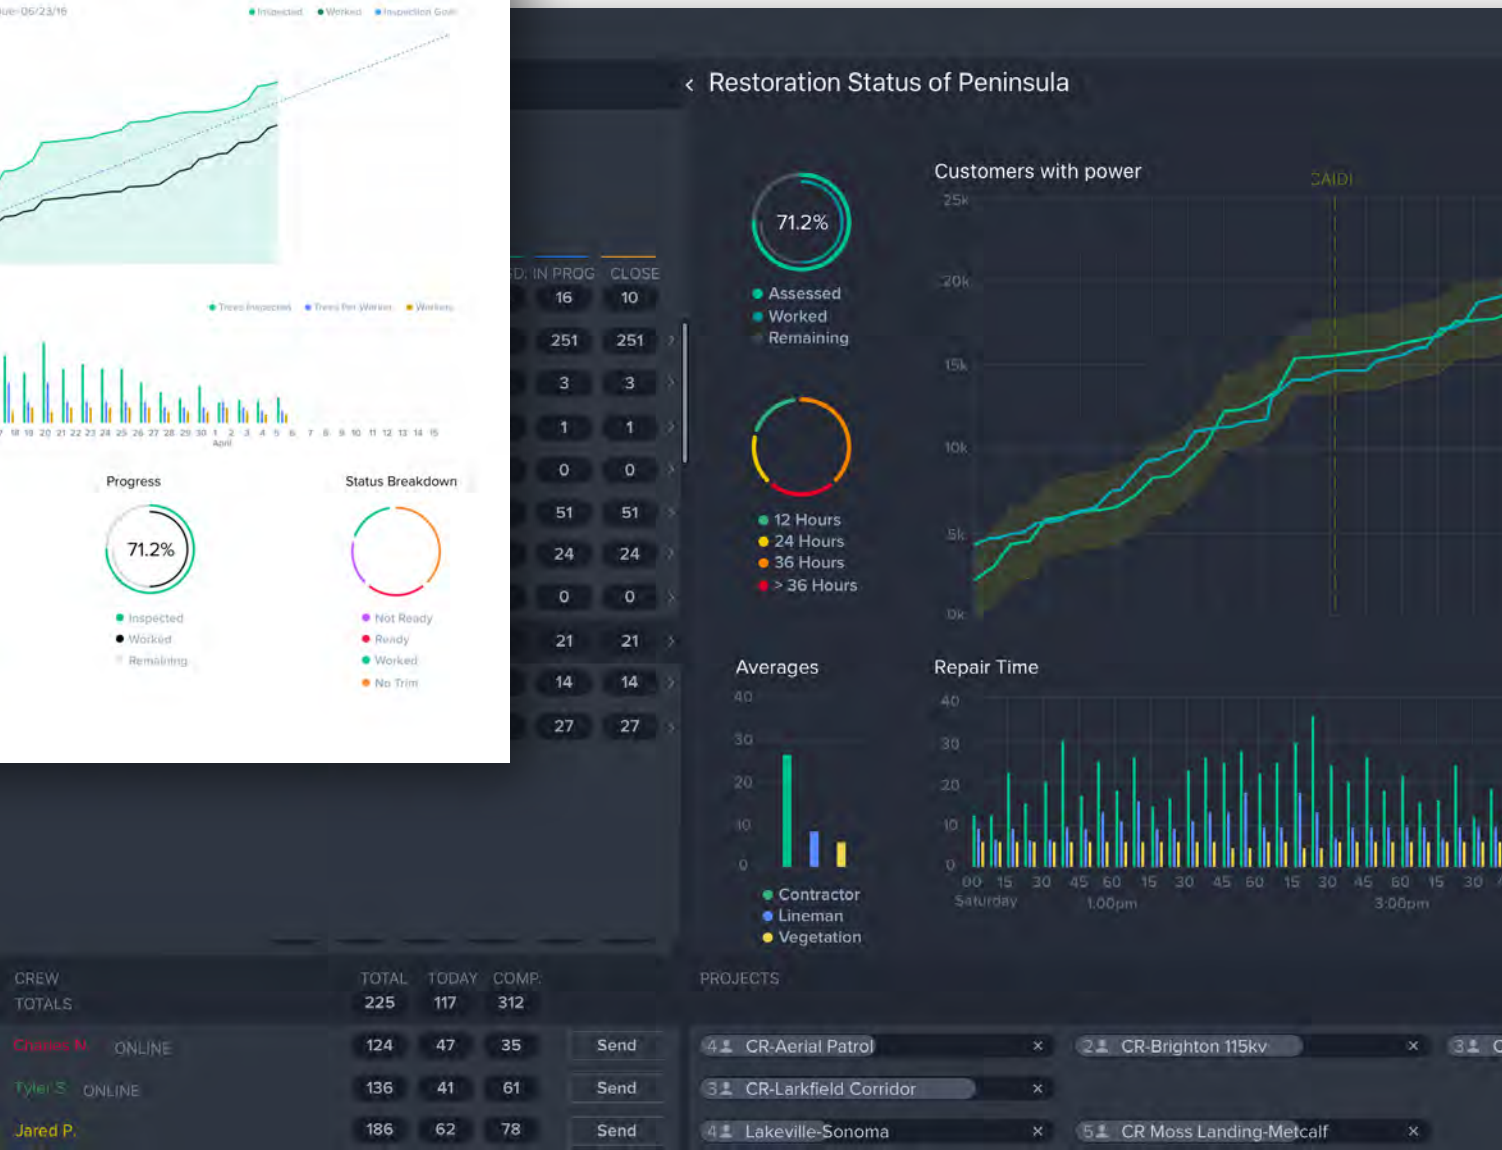

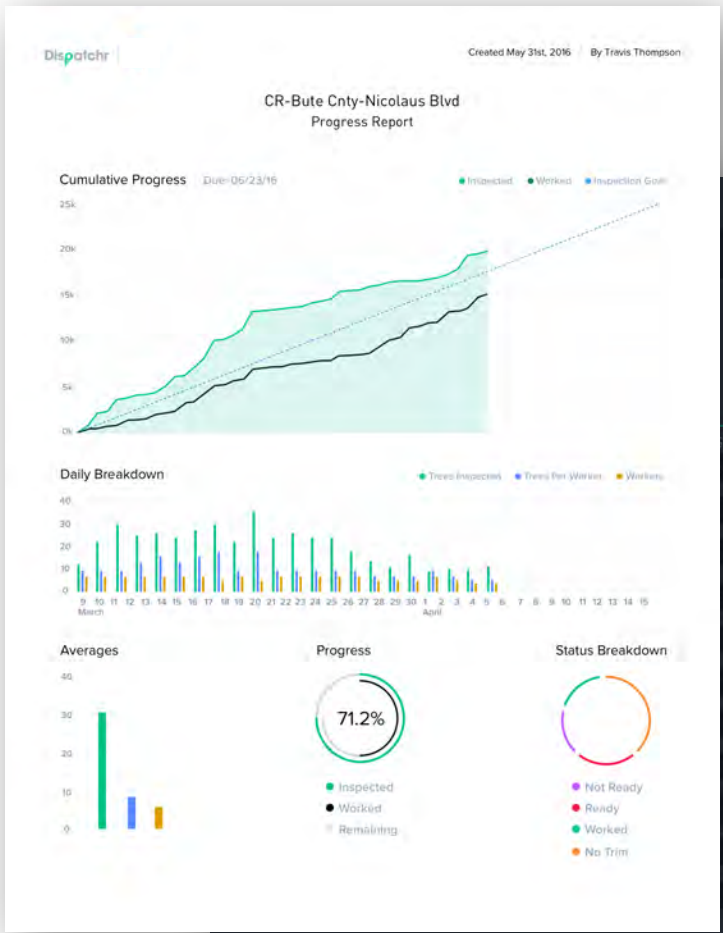

Track Work Progress as it Happens

Back in the office, the Dispatchr Platform provides insights into what is happening out in the field, as it happens: Crew Positions, Asset Data, Work Disposition, Work Remaining, Crew Schedules and more. Work assignments can be updated and sent to crews out in the field.

Everything that's needed to quickly analyze, act on, and follow up with real-world threats to utility assets and infrastructure is in one place, in front of the people that need it most.

Shared Reporting with Live PDFs

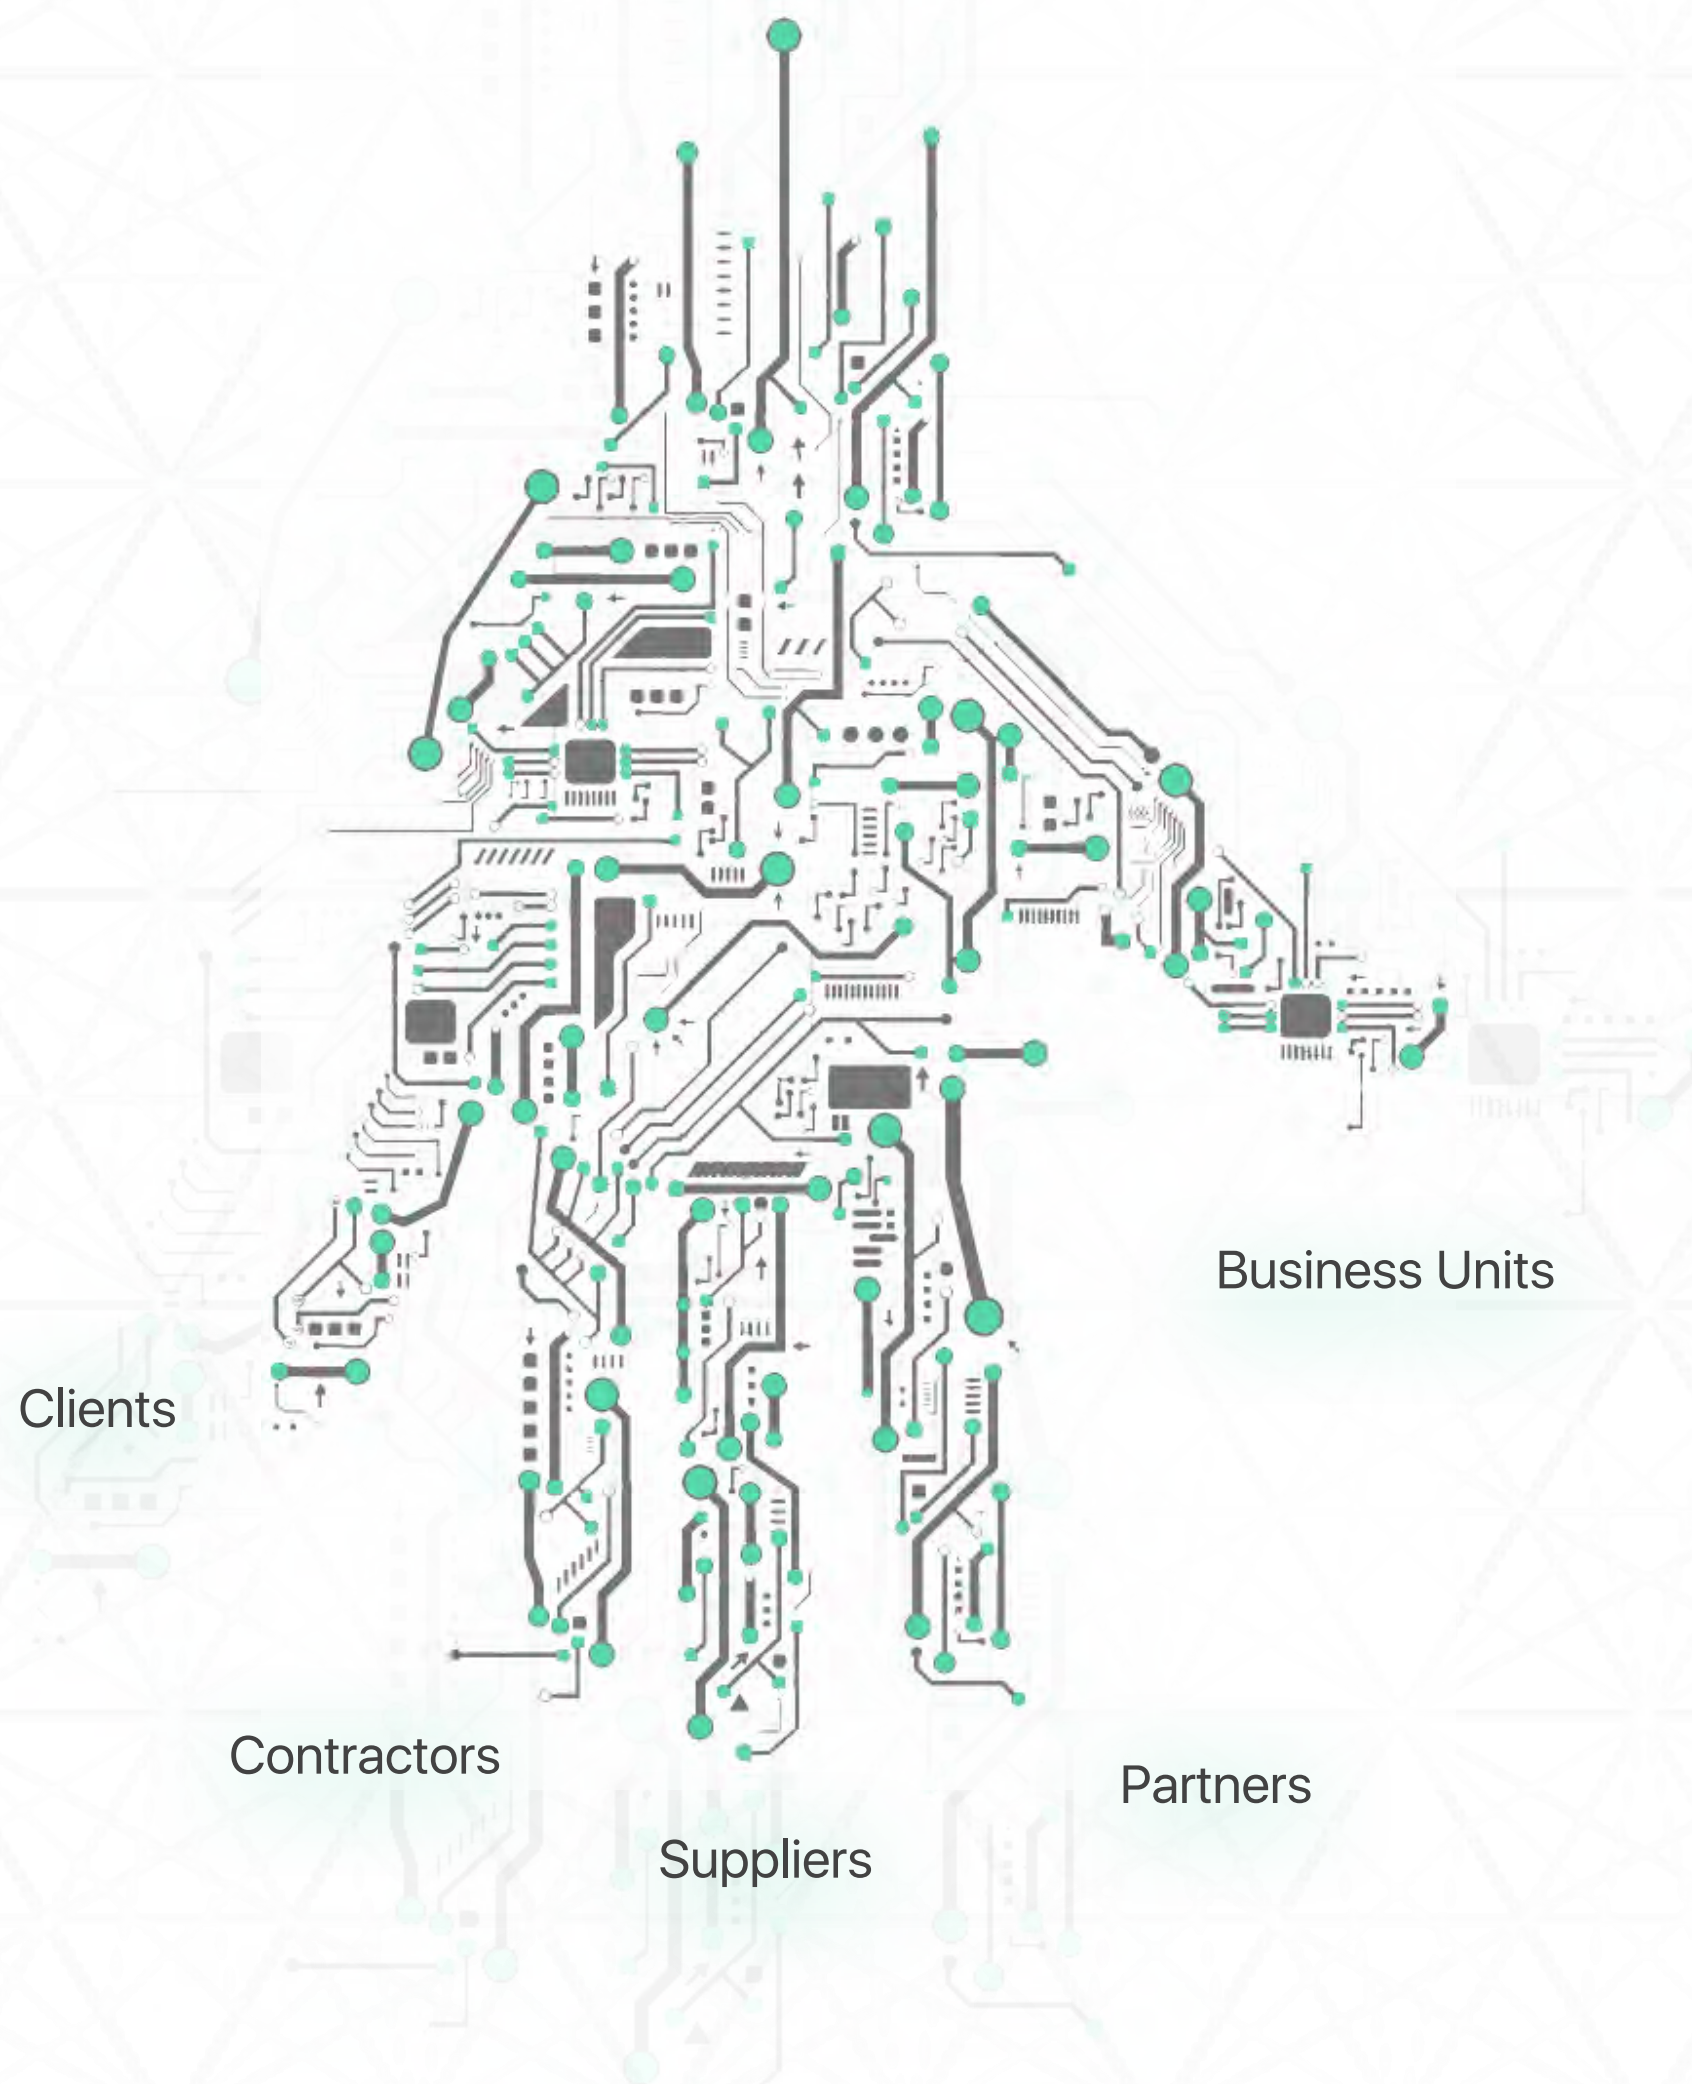

The Dispatchr Platform offers the ability to share an array of situational reports to key external stakeholders which have the ability to refresh themselves (Live PDF) based on stakeholder needs. Dispatchr recognizes the value of preserving audit data while providing the ability to instantly substantiate completed work for accurate and expedited billing, saving time and enhancing compliance, crew safety and productivity.

Single Source of Truth

The Dispatchr Platform serves as a beacon to bring together all of your project stakeholders, whether they be internal business units, external contractors, shared asset co-owners or project customers. As the single source of truth for your crew and asset activity data, Dispatchr is your invisible right hand, coordinating incoming data throughout your project lifecycle and making it available to the individual stakeholders who need it, when they need it most, from wherever they need to be.

By bringing project stakeholders together through one platform, Dispatchr streamlines business processes, communication and workforce management in a way which fosters a culture of innovation, workflow alignment and risk mitigation. Maintain your customer centric service delivery, compliance and reliability models while allowing yourself to focus on planning and executing long-term objectives that align with your company mission, vision and values - your True North.

Completely Paperless Ecosystem

Enter data with a click, not a scribble. A paper free system means fewer errors, faster communication, easier data management, permanent audit history, better oversight, stronger insight and an overall safer, more reliable utility grid.

Simple, Easy to use Interfaces

Dispatchr applications are designed specifically with you and your users in mind. We take great care and pride in ensuring that our applications are highly usable by all of your workforce in their individual work environments.

Straightforward to Deploy and Scale

The Dispatchr Client Support team is ready to work with you to deploy your project following a straightforward deployment process. We understand your workflow, help you set it up, train you on how to use it and guide you as you grow.

Secure and Reliable

The Dispatchr Platform is built on top of industry leading cloud software technology to ensure a highly reliable and secure environment. Our engineering teams will work with your technology champions to ensure your needs are satisfied.

Phased Deployment

From Concept to Deployment, we'll be there every step of the way.
